When you launch the application, it displays all its functions organized in modules and in a clean, intuitive

interface. Those modules can easily be arranged as you need from the context menu. To initialize AirRack you need to select the ASIO driver and audio sample rate, then click on the power button. The utility displays a volume indicator for the signal level in the audio equipment and the latency of the driver. you with the option to select audio tracks stored on your computer and mix them to create a unique sound. You can also load the contents of an audio disc. Another important feature the tool offers you is the possibility to adjust the equalizer as you see fit for your project while saving those settings as presets that you can access later. In the end, you can specify a location on your disk and save your creation as a stereo MP3
