This is an application, designed to help you get better at Atari 2600 games (or anything for that matter). There are many Atari consoles and Atari 2600 games - this application allows you to play them easier, by disassembling them and being able to understand the code. This application is extremely easy to use and it doesn't require any other software to be installed (the game will work while you are logged into the console). Moreover, it is completely free. What this application is designed to do: Help you to learn Atari 2600 games; Help you to open ROMs without a .ATR cartridge; Do not steal your cartridges (but we wouldn't want that, would we?). DiStella Activation Code Features: How to install: Installing the ROM extractor: • Go to the desired folder (you must be logged into the console, by pressing the 'B' button). • Extract the DiStella Cracked Version.bin file. Installing the game: • Run the console. • Press the console's 'B' button to log into the console. • Press the 'A' button to select 'DiStella Crack For Windows ROM Hunter (Touhou Project)' from the 'Game: [RAM] Set' menu. • Press the 'B' button to continue. • Press the console's 'A' button to enter 'Touhou Project'. • Press the console's 'B' button to log into the console. • Select the game you want to play from the 'Games' menu. • Press the console's 'A' button to play the game. • When the game finishes, it will return you to the 'Touhou Project' menu, so you can continue playing with the features. DiStella and Other Pmods: • If you wish to play a game that has a 'Touhou Project' category, the game should contain a folder called 'Touhou Project' - where there's a ROM named 'Touhou Project (Touhou Project).(common).rom'. If you find such a folder, press the console's 'A' button to load the ROM (selecting 'Touhou Project (Touhou Project).rom'). • DiStella does not require a save state, but it may ask you to press 'A' to save. Press 'A' to continue. • If you do not have a

========== + Easy to use + Command line-based + Lightweight + Scriptable + Portable The idea behind the application is simple, to automatically analyze a game in order to accurately find out the size of the binary file. After that, a discussion thread will appear, that allows you to define the length of the code (the time a call lasts), the total length of the program, the size of each section, the address range to execute, etc. You can also choose the entry point of your game and the location of the code for execution. Lastly, you can write to the disassembler the desired changes you want to perform and make them happen. However, the execution will be triggered only when you provide DiStella with the original ROM and the new binary. Scripting: ========== You can use it as a batch script to generate a new disassembler. Features: =========== - Possibility of choosing the location of the entry point of the game. - Possibility of choosing the location of the code for execution. - Helping the user to relocate parts of the original binary. - Calculating the size of the binary file, and the entire amount of code, the address range to relocate, all in hexadecimal numbers. - Locate calls. - Disassembly script support for assembling, sorting, moving and renaming. - Possibility of freezing the application until the disassembler finishes loading. - Reverse disassembly.

- Partial disassembly. - Call relocation. - Quick Entry. - Xref search. - Support for new programs. - Time for calls. - Sorting. - Batch Execution. - Ability to save the work. - Filename support. - Support for DISC. - Support for DASM. Installation: ============== With a shell: #wget #unzip dasM-latest.zip #cd disassembler #sh disassembler_install.sh #chmod +x disassembler #./disassembler - If you are familiar with the console, you can use the command prompt: - c:\> cd "C:\Program Files (

DiStella is a free application that was designed with the following requirements in mind: - Easy to use - Reliable - Lightweight - Support for easy code modification Features: - Supports.di files - Arithmetic calls out of the range are relocated - Locks the current code view so it cannot be changed - The user can determine the type of call out (Constant, Jump, Arithmetic, Push) - The user can see the memory map of the original ROM - Disassembles the ROM and shows the view of the disassembled code in a simple text editor - Quick and easy navigation menu - Support for saving the disassembled code to a file - Support for easily editing the code - Support for DASM and easy code modification DiStella License: DiStella is free for everyone to use. In order to achieve this, it has been released under a simplified "free as in software" license agreement. All we ask in return is that you please tell us about it. DiStella Usage: DiStella is designed to work with existing.di files and can open them with a single click. When launching it for the first time, the user will be prompted to create an account. The user has no other obligations towards the program. If the user wishes to share the open code with the world, he is able to do so by clicking the "File/Save Version" button. [...] DiStella Usage Questions: No. At the risk of sounding like a broken record, I'm going to say this once more: Metropolis's concept is an excellent one, but not one that has any real benefit for the game that I own. I own the computer version of no less than 100 games from Atari. Of those, not a single one has this feature. And even if I was to go about finding all the ones that do, I would really be ruining the purpose of it. Why? Because if I hadn't given it away already, I'm not going to walk into a shop and say "Yeah, here, want this cheap game?". The feature that Metropolis was given for is that it does what Metropolis does. If you don't own a Metropolis game, and you discover the feature, either search the net, or go buy a Metropolis game. If you're going to make a Metropolis-like game, and are willing
